

Inventory Manager 50 for Sage 50

'Inventory Management made simple'

The Datalinx Inventory Manager system for Sage 50 professional is a stock control and management system developed specifically for businesses using Sage 50.

Datalinx has combined its knowledge of warehouse management, barcoding hardware and Sage 50 to create a product that has been fully approved and certified by Sage UK to handle your businesses stock management demands.

Inventory Manager 50 interacts with Sage 50 to ensure that details about product code stock levels and allocations are catered for. Inventory Manager 50 is ideal for any business with stock and using Sage 50 as its accounting system. Through Datalinx's core integration within the Sage 50 package, actions carried out on the hand held scanners update Sage records and transaction history, improving business visibility and control of stock holding.

Inventory Manager 50 has been implemented within a variety of industries whose key commonality is the use and storage of stock, be this in a warehouse, stores, factory stock room, shop or retail outlet.

Transactions, once processed and validated by the hand held scanners, are automatically uploaded into the main Sage business system when the hand held is placed into the docking station. This process immediately updates all relevant Sage 50 stock records and any Sage 50 record changes are also downloaded to the hand held, ensuring both systems remain synchronised.

Business Benefits

- Improve stock accuracy
- Reduce stock take time
- Reduce picking errors
- Automatic invoice generation
- Create, pick and complete orders in one simple process

Modular Structure

Each Inventory Manager 50 module relates to one of the key inventory management functions common to any business:

Goods Receipt

Stock take

Goods Despatch

Two specific modules are used to support all other functions:

Barcode Label Printing

Product Code Cross-References

Modular Implementation

Each module can be purchased and implemented separately, to meet the needs of your business and budget.

Ready to Use 'Out of the Box'

Whichever module is the first to be installed, it will include at least one rugged barcode scanning hand held, fully configured and ready to use. Simply install the software from the CD, dock the hand held and start using the system.

Specifically Designed for Your business

Ideal for single or multiple shops and retail outlets, factory stock rooms and small stores/warehouses in businesses using Sage 50 as their business and accounts system

Here to Help

Whatever combination of Inventory Manager 50 modules you decide is right for your business, installation and implementation support is available from your Sage 50 Reseller or www.datalinx.co.uk
